EDUCATION

Indian Institute of Information Technology, Tiruchirappalli (IIITT) Tiruchirappalli, Tamil Nadu
B.Tech in Electronics and Communication Engineering CGPA: 8.23 *Aug 2022 - May 2026*

ACHIEVEMENTS

LeetCode: Knight Badge (1905+) in contests, actively participating in problem-solving challenges
CodeChef: Rating 1700+ (3*), consistently ranked among top performers
Codeforces: Specialist 1430+ consistently ranked among top performers
Atcoder: 7 kyu (670+) consistently ranked among top perfomer
HackVega 2.0 2026 Finalist: Advanced to the finals, ranking among the top 0.3% of 47,000+ participants.

EXPERIENCE

Full Stack Developer Intern May 2026 – Oct 2026
SPONZO

- Built the frontend for 10+ dashboards in Sponzo seller platform using React and TypeScript.
- Developed CRUD modals and integrated 30+ internal REST API endpoints for data-driven support workflows.
- Implemented Redis caching and cache invalidation strategies, reducing API response times by approximately 40% and eliminating stale-data issues
- Developed an end-to-end bulk data pipeline that parses user-uploaded CSV files, ingests updated records into the database, and dynamically updates the vendor dashboard views.
- Automated inventory reconciliation logic to automatically update active product listings and purge zero-quantity products, eliminating out-of-stock data discrepancies.

Software Developer Engineer Intern March 2025 – July 2025
IIIT TRICHY *Tiruchirappalli, Tamil Nadu*

- **Developed production dashboards** for the college website, including content management (news, notices, events, achievements) and placement analytics, providing dynamic and real-time information to website visitors.
- **Designed and implemented a GitHub Actions CI/CD pipeline** with automated validation for required fields preventing invalid data from reaching the production website and providing detailed validation feedback to administrators.
- **Automated the deployment workflow** by integrating testing dashboards with the production dashboards, where validated changes were deployed only after approval, improving deployment reliability, data accuracy, and content management efficiency

PROJECTS

Secure Peer-to-Peer Digital Wallet | ***RESTful API'S, Express, MongoDB, ACID Transactions*** Live Github

- **Enforced Transaction Integrity :** Implemented Idempotency Keys to prevent double - spending anomalies during network failures, ensuring exactly once execution for all financial operations.
- **Secured Fund Transfers :** Architected a Two-Phase Transfer System that validates recipient identity and server-side balances prior to execution, preventing logic errors and unauthorized overdrafts.
- **Optimized User Experience :** Engineered a Live Dashboard with efficient short-polling (3s interval) to instantly reflect balance updates, prioritizing data accuracy with minimal overhead.

Cloud Drive System | ***Node.js, Express.js, MongoDB (Grid Fs), React.js, Streams API, Docker*** Github

- Designed a hierarchical file system using the Parent-Reference pattern in MongoDB, enabling efficient nested folder structures and O(n) directory traversal while maintaining database schema simplicity
- Implemented a robust Data Lifecycle Manager featuring Soft Deletes and Trash Recovery, preventing accidental data loss by flagging records for archival rather than immediate permanent deletion.
- Developed a real-time storage validation system that updates user storage usage and prevents uploads exceeding defined limits.
- **Containerized** the React frontend and Node.js backend using Docker and Docker Compose, integrating MongoDB through its official image and persistent volumes for reliable data storage.

Collaborative Real-Time Text Editor | ***Node.js, Socket.IO, React.js, MongoDB, WebSockets*** Live Github

- Built a multi-user real-time editing platform supporting simultaneous document updates.
- Integrated Socket.IO to broadcast code changes to all connected clients in real-time with less than 100ms latency.
- Created a room-based architecture allowing users to create private coding sessions with unique room IDs.

TECHNICAL SKILLS

Languages: C, C++, Python, Java, JavaScript, SQL, HTML/CSS
Frontend: React, Vite, TypeScript, Tailwind CSS, Chart.js, Jest.
Backend: Node.js, Express, Socket.IO, REST APIs
Databases: MongoDB, MySQL, Redis
Tools & DevOps: Git, GitHub, GitHub Actions (CI/CD), Linux, Postman, Render, Vercel, Docker
Core CS Fundamentals: Data Structures & Algorithms (DSA), Operating Systems (OS), DBMS, Multithreading & Concurrency.
Software Design: Low-Level Design (LLD), Object-Oriented Programming (OOPs)
